

To whom it may concern: I am a professional truck driver and pay a monthly fee for my XM Satellite radio service, which I rely on daily for up to date weather and traffic information. Please reject the NAB's petition 04-160 that would limit or eliminate the service I rely on from XM radio. It is a nuscience to try and scan through the dial on my AM or FM channels to try and find a weather or traffic report. In addition, it takes my attention away from the road and traffic around me as I focus on trying to find a station that would provide me with the information I need. Such a distraction is dangerous, and could be contributed to higher accidents and deaths on the roadway. My XM instant weather and traffic channels are pre-set, are easy and safe to select, and provide me with instant information. Thank you.
